

THE POWERSAFE ADVANTAGE

- All Boards are IP66 rated (IP65 with E Stop), not just inlets & sockets.
- 5 year pro rata warranty.
- Most boards are made in Australia by our team of qualified electricians.
- The large industrial range of boards feature Emergency Stop capability along with under voltage protection and phase indication lights (showing power on each phase. These boards are also fitted with a unique IP66 breather valve to avoid condensation issues. This allows two way airflow and one way moisture flow out of the board. Powersafe are the only manufacturer to offer these technologies as standard.
- Most boards are a stackable design for easy and efficient transport and storage.
- We manufacture our own switchgear allowing us to maintain the high quality of everything we use, giving us the confidence to stand behind our 5yr warranty*
- Individual earth leakage protection available on each 240 volt outlet
- RCD's and MCB's are 10Ka rated
- All standard 3 phase outlets have a rotary on/off switch – you do not have to switch through the MCB – making a safer faster disconnect time
- 3 phase outlets can be locked out at the rotary switch
- All windows are lockable with up to an 8mm padlock
- Boards are made from UV resistant, high impact polyethylene
- Due to our unique design all boards in our Industrial Range are protected from board rollovers preventing costly repairs or replacements
- Spare parts are readily available from electrical wholesalers eliminating costly down time.
- Plug and go design - no hard wiring required
- We can custom build to your specifications
